## Challenge 10 - String Brain Teaser

Photo by [John Hult](#)

### Objectives

Find smallest window that contains all characters of a given string.

### Guidelines

In a given text, extract the smallest sequence of characters containing all characters of a given string.

Open `src/string_brain_teaser.py` with your text editor and implement the `smallest_sub_string` function.

I/O : prompt the user to ask for a text to analyse and a sequence of letters.
